ChemInstruments Introduces a New Generation of Data Management Software: EZ-LAB 3.0

ChemInstruments new EZ-Lab 3.0 Data Management software interfaces with the entire line of load cell based testing platforms. The upgraded software is a simple and intuitive way to get more out of testing equipment. EZ-Lab 3.0 Data Management software provides test data results in report-ready format. This new, easy to use software provides even more powerful statistical analysis and reporting capabilities on any Microsoft Windows based personal computer.

Some of the new EZ-Lab 3.0 Software Benefits

One main screen contains all commands for easy setup and operation. Data is automatically graphed upon test completion with pertinent data points highlighted for easy reference. Up to 5 graphs can be overlaid for comparison purposes and up to 99 tests can be tabulated for statistical analysis. A new graph cropping feature provides more detailed analysis and selected views

Files are automatically saved in the root directory for security purposes and may also be saved anywhere on a local network. Test data files are transferable across networks and the Internet. Plus, test results can be shared in Adobe .PDF file format. And you can convert EZ-Lab files into Microsoft Excel files with one click.

For more information on EZ-Lab 3.0 data management software and the ChemInstruments line of testing equipment contact Brian Bresser.

#####

ChemInstruments Inc., a Chemsultants International Inc. company, is a global leader in the design, development and manufacture of testing, sampling and product development equipment for the adhesive, coating and printing industries. Chemsultants International is a worldwide leader in the research, development and testing, pilot scale and contract manufacturing of novel, specialty polymer-based products and technologies.
